

# Using Roslyn - Consuming C# Solutions and Projects

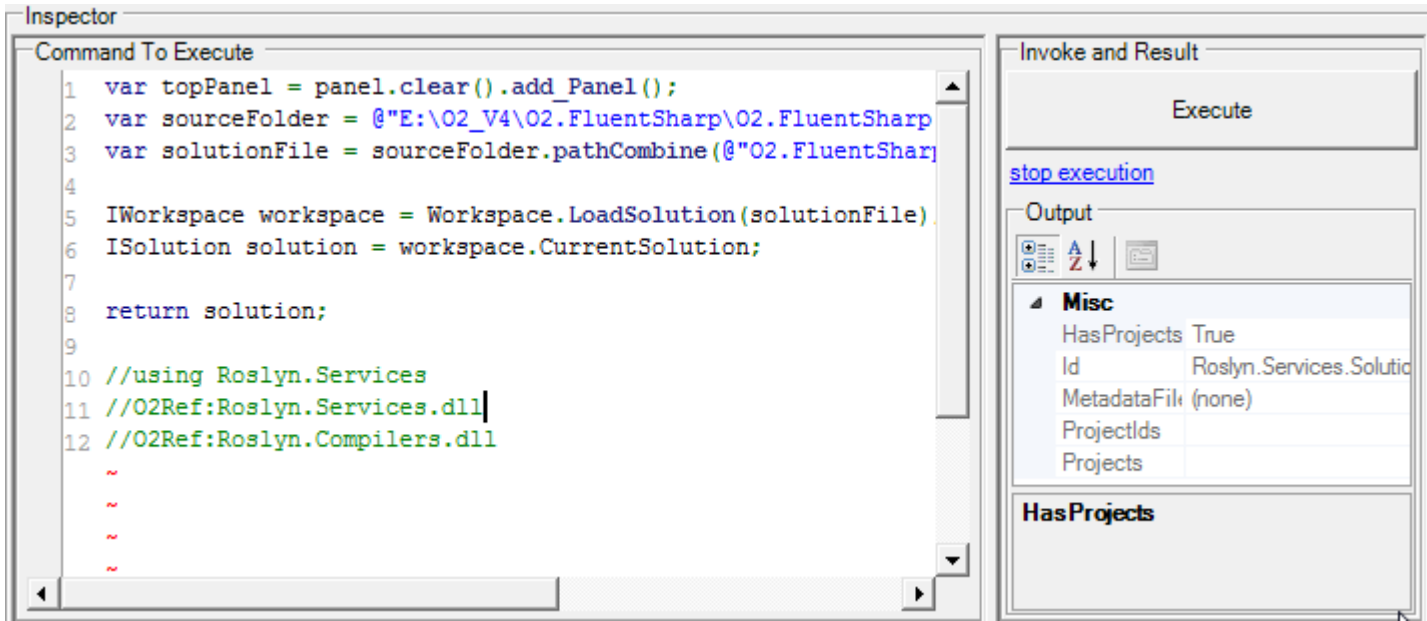

## Loading a Solution File

```
var topPanel = panel.clear().add_Panel();
var sourceFolder = @"E:\O2_V4\O2.FluentSharp\O2.FluentSharp.CoreLib";
var solutionFile = sourceFolder.pathCombine(@"O2.FluentSharp.CoreLib.sln");

IWorkspace workspace = Workspace.LoadSolution(solutionFile);
ISolution solution = workspace.CurrentSolution;

return solution;

//using Roslyn.Services
//O2Ref:Roslyn.Services.dll
//O2Ref:Roslyn.Compilers.dll
```

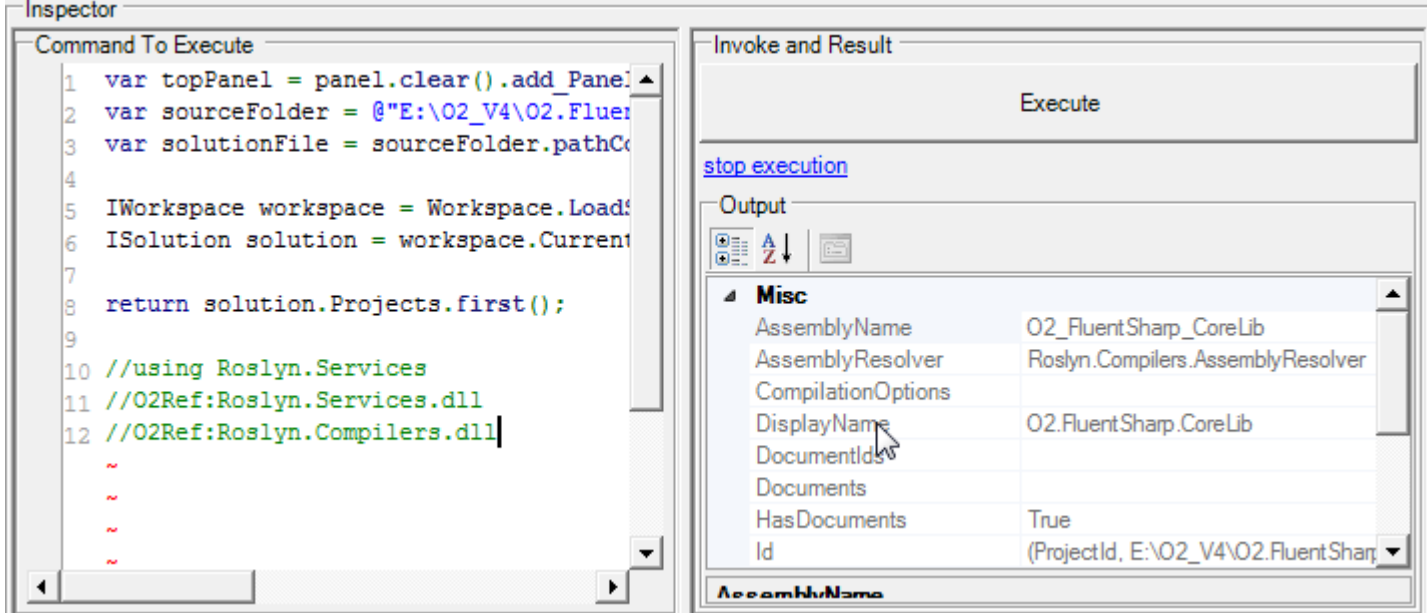

## Getting first Project

```
var topPanel = panel.clear().add_Panel();
var sourceFolder = @"E:\O2_V4\O2.FluentSharp\O2.FluentSharp.CoreLib";
var solutionFile = sourceFolder.pathCombine(@"O2.FluentSharp.CoreLib.sln");

IWorkspace workspace = Workspace.LoadSolution(solutionFile);
ISolution solution = workspace.CurrentSolution;

return solution.Projects.first();

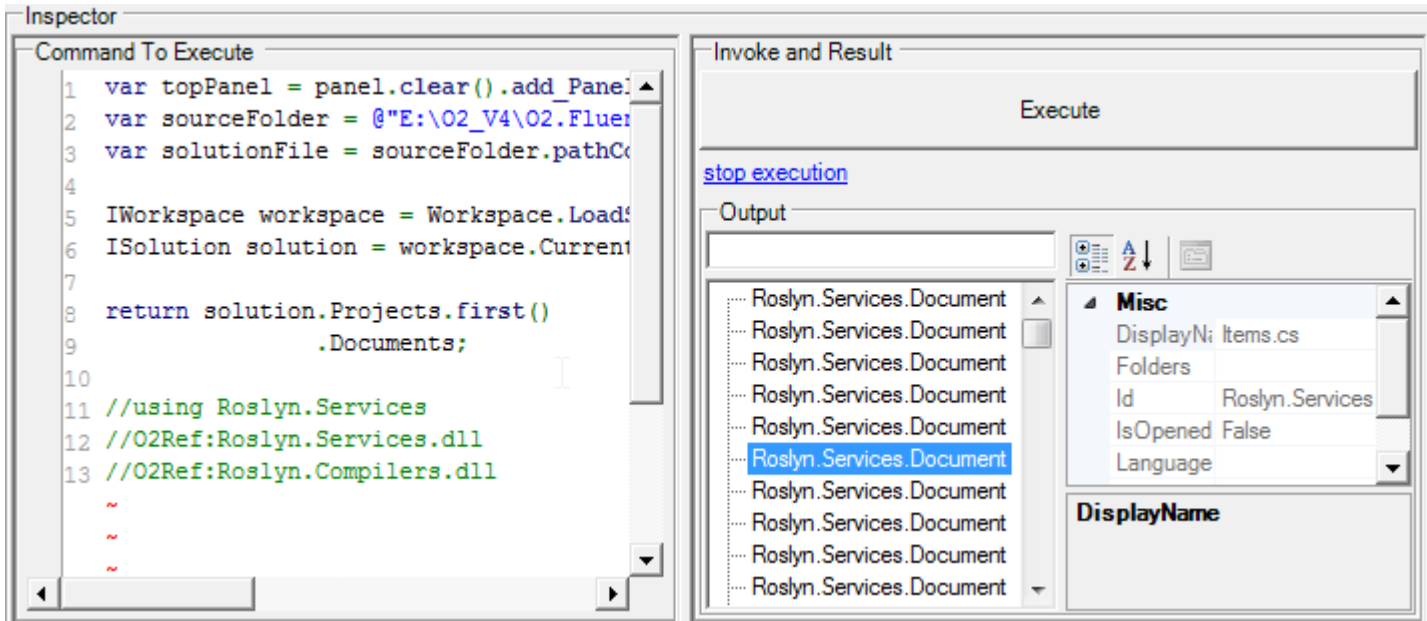

//using Roslyn.Services
//O2Ref:Roslyn.Services.dll
//O2Ref:Roslyn.Compilers.dll
```

### Getting Files (from first project)

```
IWorkspace workspace = Workspace.LoadSolution(solutionFile);
ISolution solution = workspace.CurrentSolution;

return solution.Projects.first()
    .Documents;
```

### For first Document see: its properties, source code, semantic model and syntax tree

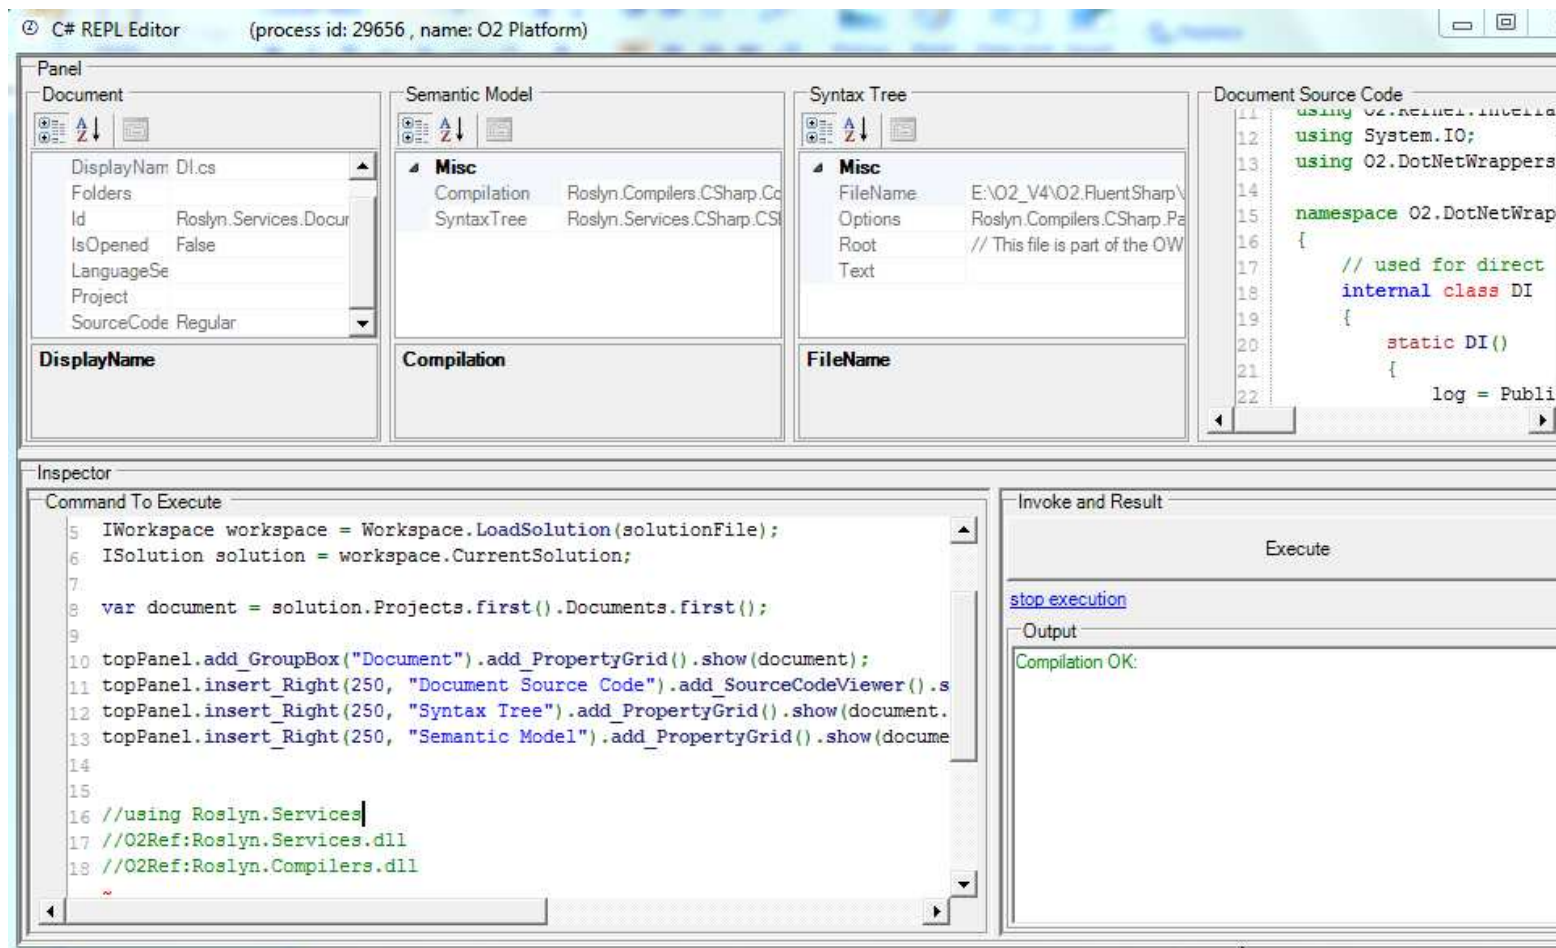

```
var topPanel = panel.clear().add_Panel();
var sourceFolder = @"E:\O2_V4\O2.FluentSharp\O2.FluentSharp.CoreLib";
var solutionFile = sourceFolder.pathCombine(@"O2.FluentSharp.CoreLib.sln");

IWorkspace workspace = Workspace.LoadSolution(solutionFile);
ISolution solution = workspace.CurrentSolution;

var document = solution.Projects.first().Documents.first();

topPanel.add_GroupBox("Document").add_PropertyGrid().show(document);
topPanel.insert_Right(250, "Document Source Code").add_SourceCodeViewer().set_Text(document.GetText().ToString());
topPanel.insert_Right(250, "Syntax Tree").add_PropertyGrid().show(document.GetSyntaxTree());
topPanel.insert_Right(250, "Semantic Model").add_PropertyGrid().show(document.GetSemanticModel());
```

```
//using Roslyn.Services
//O2Ref:Roslyn.Services.dll
//O2Ref:Roslyn.Compilers.dll
```

## Opening up a Solution, Compiling it and seeing the errors created:

```
var topPanel = panel.clear().add_Panel();
var actionsPanel = topPanel.insert_Above(40, "Actions Panel");
var codeViewer = topPanel.add_SourceCodeViewer();

var sourceFolder = @"E:\O2_V4\O2.FluentSharp\O2.FluentSharp.CoreLib";
var solutionFile = sourceFolder.pathCombine(@"O2.FluentSharp.CoreLib.sln");
var errorsList = topPanel.insert_Right().add_TreeView();

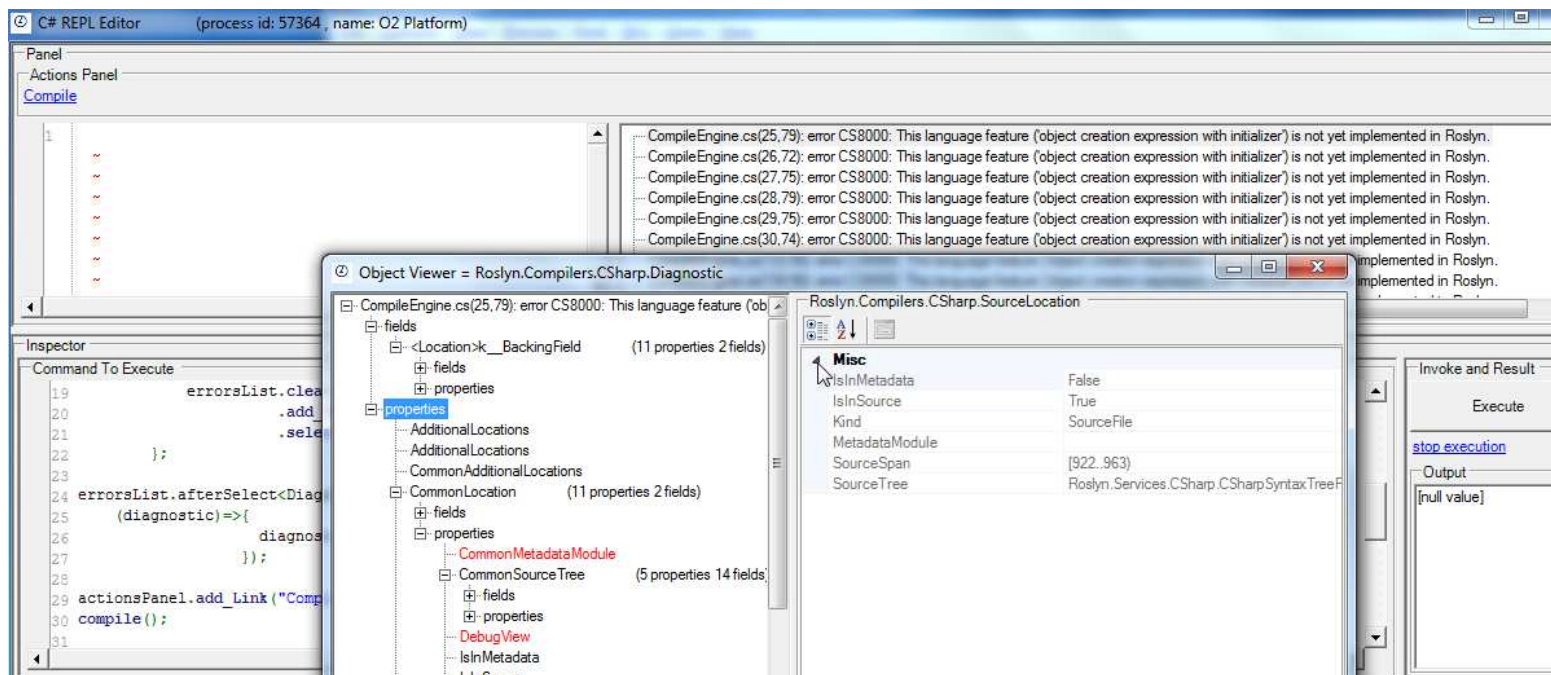

Action compile =
    ()=>{
        IWorkspace workspace = Workspace.LoadSolution(solutionFile);
        "Compiling Project".info();
        var o2Timer = new O2Timer("Solution Compilation").start();
        ISolution solution = workspace.CurrentSolution;
        var project = solution.Projects.first();
        var cancellation_token = new CancellationToken(false);
        var compilation = project.GetCompilation(cancellation_token);
        o2Timer.stop();
        errorsList.clear()
            .add_Nodes(compilation.errors())
            .selectFirst();
    };

errorsList.afterSelect<Diagnostic>(
    (diagnostic)=>{
        diagnostic.details();
    });

actionsPanel.add_Link("Compile", ()=> compile());
compile();

//using Roslyn.Compilers.CSharp
//O2File:API_Roslyn.cs
//using System.Threading
```

```
//using Roslyn.Services
//O2Ref:Roslyn\lib\net40\Roslyn.Services.dll
//O2Ref:Roslyn\lib\net40\Roslyn.Compilers.dll
//O2Ref:Roslyn\lib\net40\Roslyn.Compilers.CSharp.dll
```

## Show LineSpan on property grid (good to see what is inside that object)

```
var topPanel = panel.clear().add_Panel();
var actionsPanel = topPanel.insert_Above(40,"Actions Panel");
//var codeViewer = topPanel.add_SourceCodeViewer();
var propertyGrid = topPanel.add_PropertyGrid();

var sourceFolder = @"E:\O2_V4\O2.FluentSharp\O2.FluentSharp.CoreLib";
var solutionFile = sourceFolder.pathCombine(@"O2.FluentSharp.CoreLib.sln");
var errorsList = topPanel.insert_Right().add_TreeView();

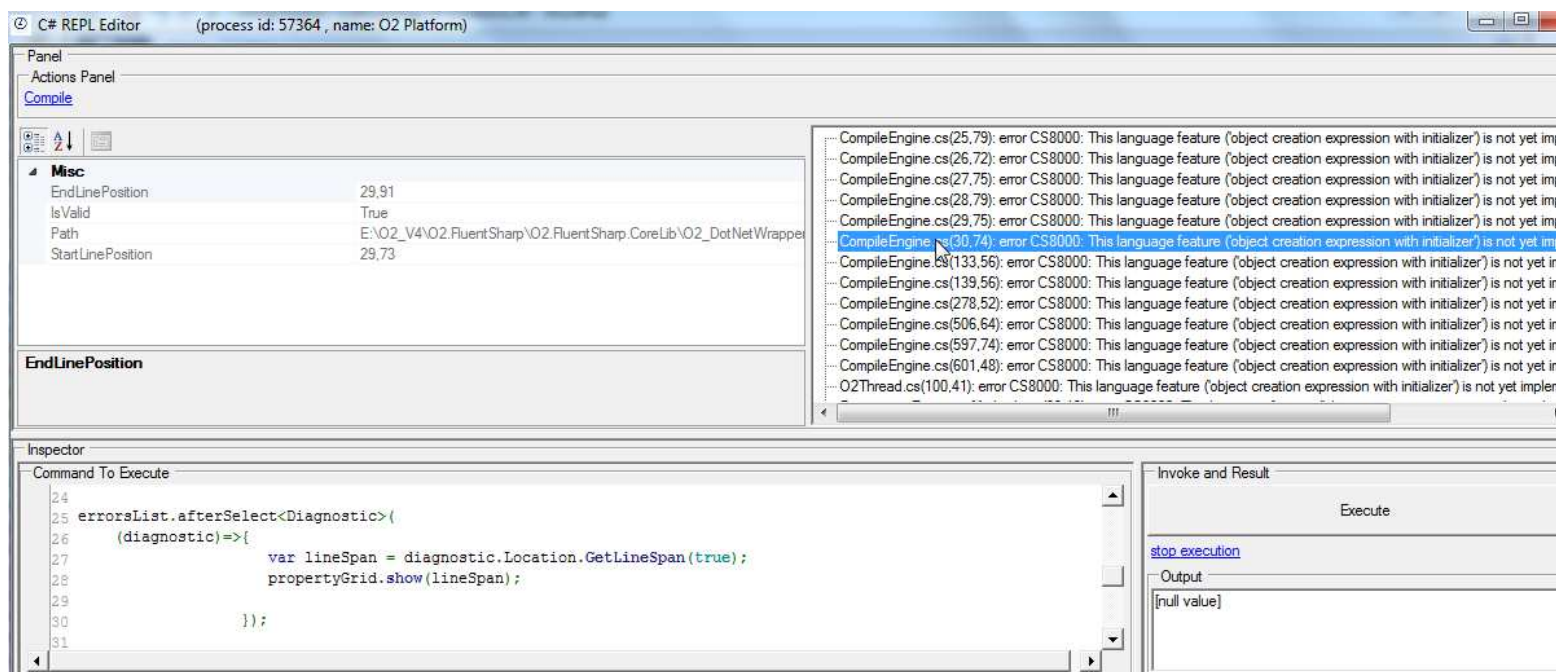

Action compile =
    ()=>{
        IWorkspace workspace = Workspace.LoadSolution(solutionFile);
        "Compiling Project".info();
        var o2Timer = new O2Timer("Solution Compilation").start();
        ISolution solution = workspace.CurrentSolution;
        var project = solution.Projects.first();
        var cancellation_token = new CancellationToken(false);
        var compilation = project.GetCompilation(cancellation_token);
        o2Timer.stop();
        errorsList.clear()
            .add_Nodes(compilation.errors())
            .selectFirst();
    };

errorsList.afterSelect<Diagnostic>(
    (diagnostic)=>{
        var lineSpan = diagnostic.Location.GetLineSpan(true);
        propertyGrid.show(lineSpan);
    });

actionsPanel.add_Link("Compile", ()=> compile());
compile();

//using Roslyn.Compilers.CSharp
//O2File:API_Roslyn.cs
//using System.Threading
//using Roslyn.Services
//O2Ref:Roslyn\lib\net40\Roslyn.Services.dll
//O2Ref:Roslyn\lib\net40\Roslyn.Compilers.dll
//O2Ref:Roslyn\lib\net40\Roslyn.Compilers.CSharp.dll
```

## Opening up source code file on node click:

```
var topPanel = panel.clear().add_Panel();
var actionsPanel = topPanel.insert_Above(40, "Actions Panel");
var codeViewer = topPanel.add_SourceCodeViewer();

var sourceFolder = @"E:\O2_V4\O2.FluentSharp\O2.FluentSharp.CoreLib";
var solutionFile = sourceFolder.pathCombine(@"O2.FluentSharp.CoreLib.sln");
var errorsList = topPanel.insert_Right().add_TreeView();
```

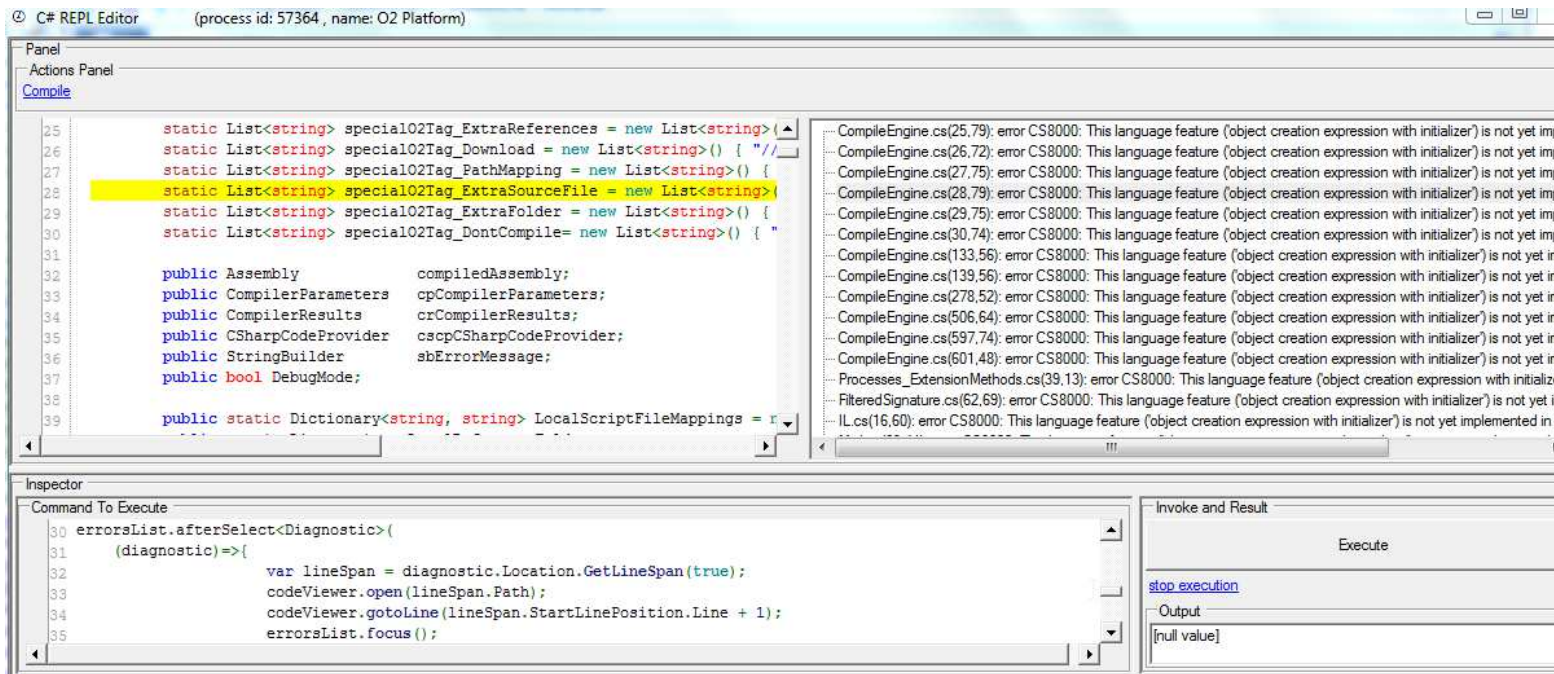

```
Action compile =
    ()=>{
        IWorkspace workspace = Workspace.LoadSolution(solutionFile);

        "Compiling Project".info();
        var o2Timer = new O2Timer("Solution Compilation").start();
        ISolution solution = workspace.CurrentSolution;
        var project = solution.Projects.first();
        var cancellationToken = new CancellationToken(false);
        var compilation = project.GetCompilation(cancellationToken);
        o2Timer.stop();
        var errors = compilation.errors();
        "There are {0} errors".info(errors.size());
        errorsList.clear()
            .add_Nodes(errors).
            selectFirst();
    };

errorsList.afterSelect<Diagnostic>(
    (diagnostic)=>{
        var lineSpan = diagnostic.Location.GetLineSpan(true);
        codeViewer.open(lineSpan.Path);
        codeViewer.gotoLine(lineSpan.StartLinePosition.Line + 1);
        errorsList.focus();
    });

actionsPanel.add_Link("Compile", ()=> compile());
compile();

//using Roslyn.Compilers.CSharp
//O2File:API_Roslyn.cs
//using System.Threading
//using Roslyn.Services
//O2Ref:Roslyn\lib\net40\Roslyn.Services.dll
//O2Ref:Roslyn\lib\net40\Roslyn.Compilers.dll
//O2Ref:Roslyn\lib\net40\Roslyn.Compilers.CSharp.dll
```

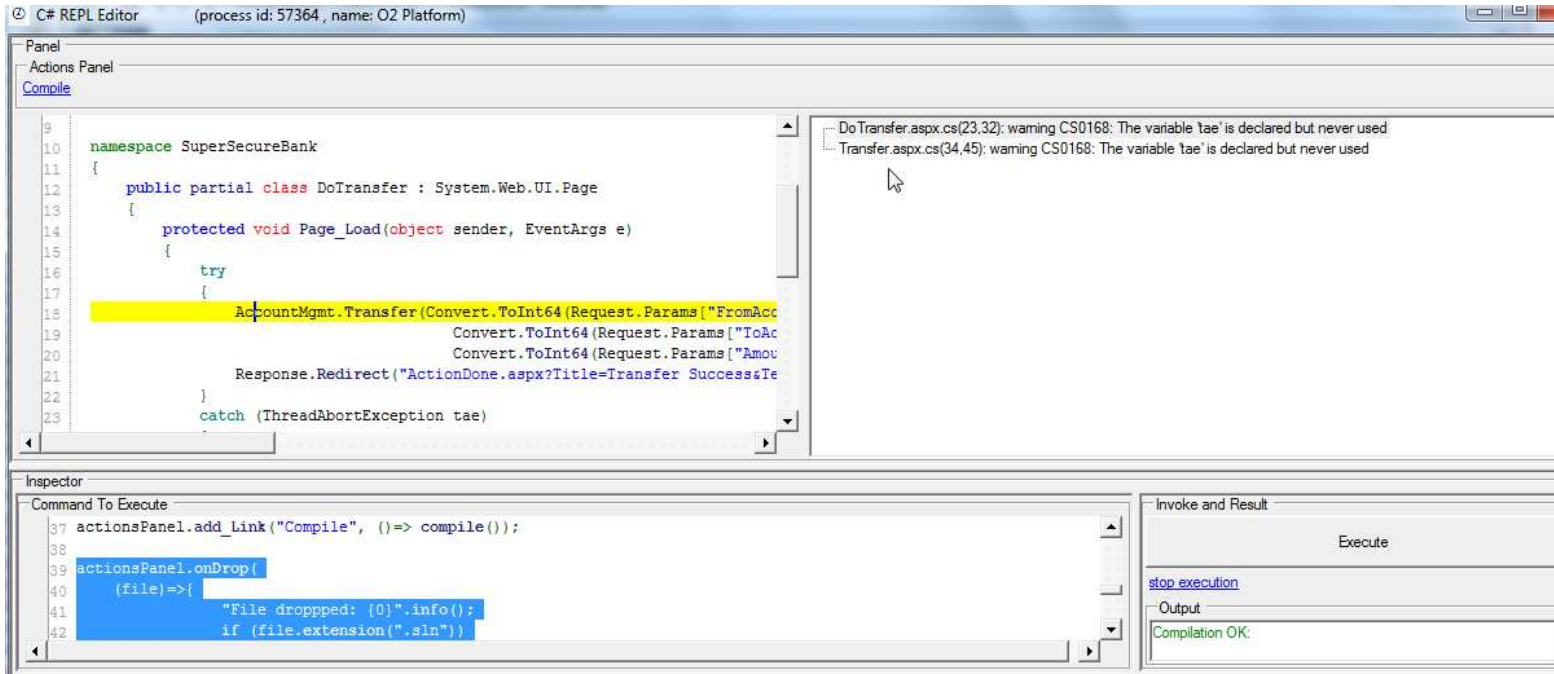

### Adding feature to load solution on Drag'n'Drop (into to the top Panel)

```

actionsPanel.onDrop(
    (file)=>{
        "File droppped: {0}".info();
        if (file.extension(".sln"))
        {
            solutionFile = file;
            compile();
        }
    });

```

... here is the GUI after dropping the SuperSecureBank.sln file:

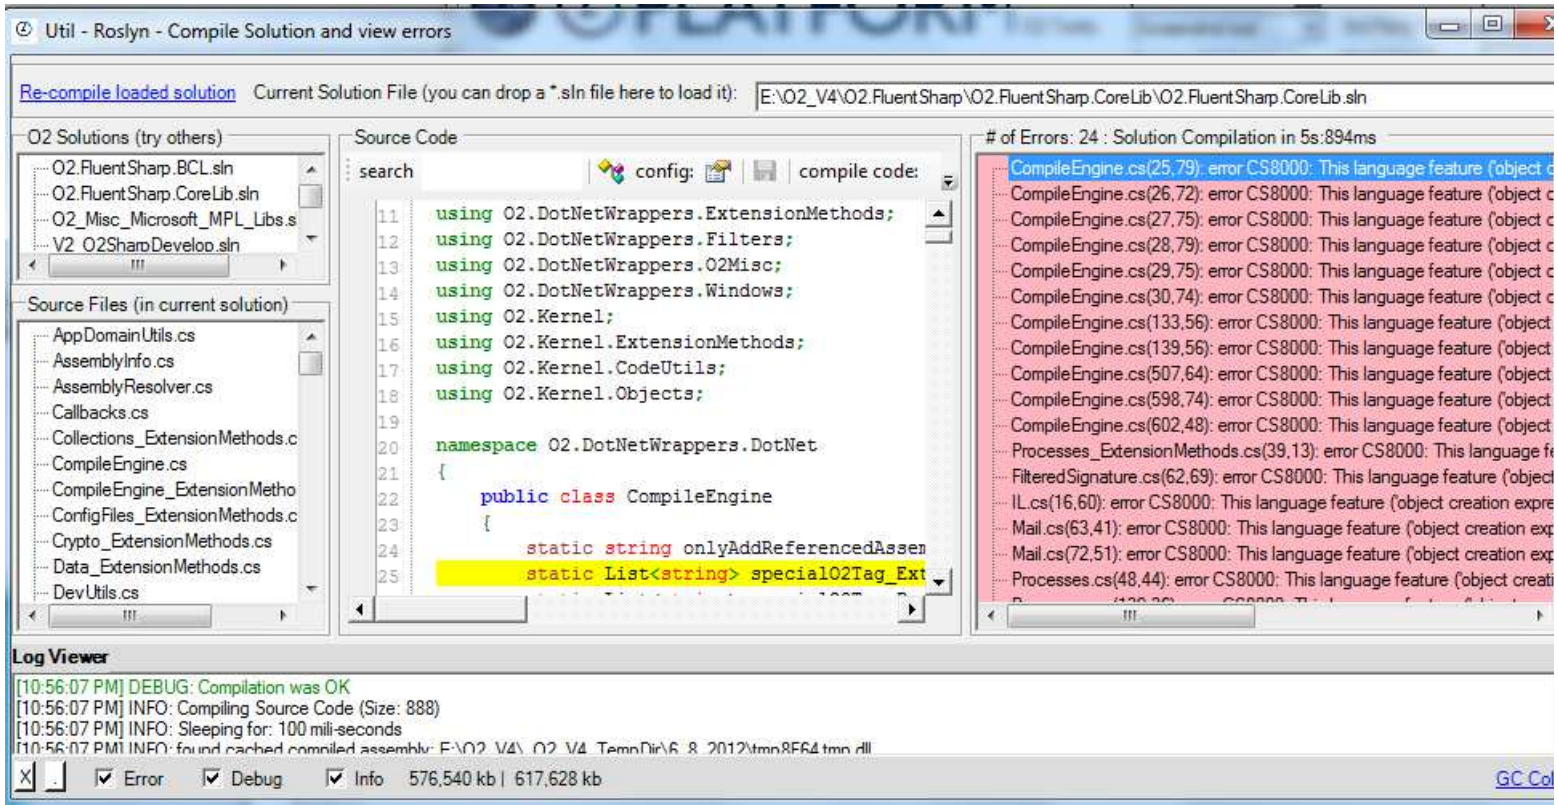

## O2 tool: "Util - Roslyn - Compile Solution and view errors"

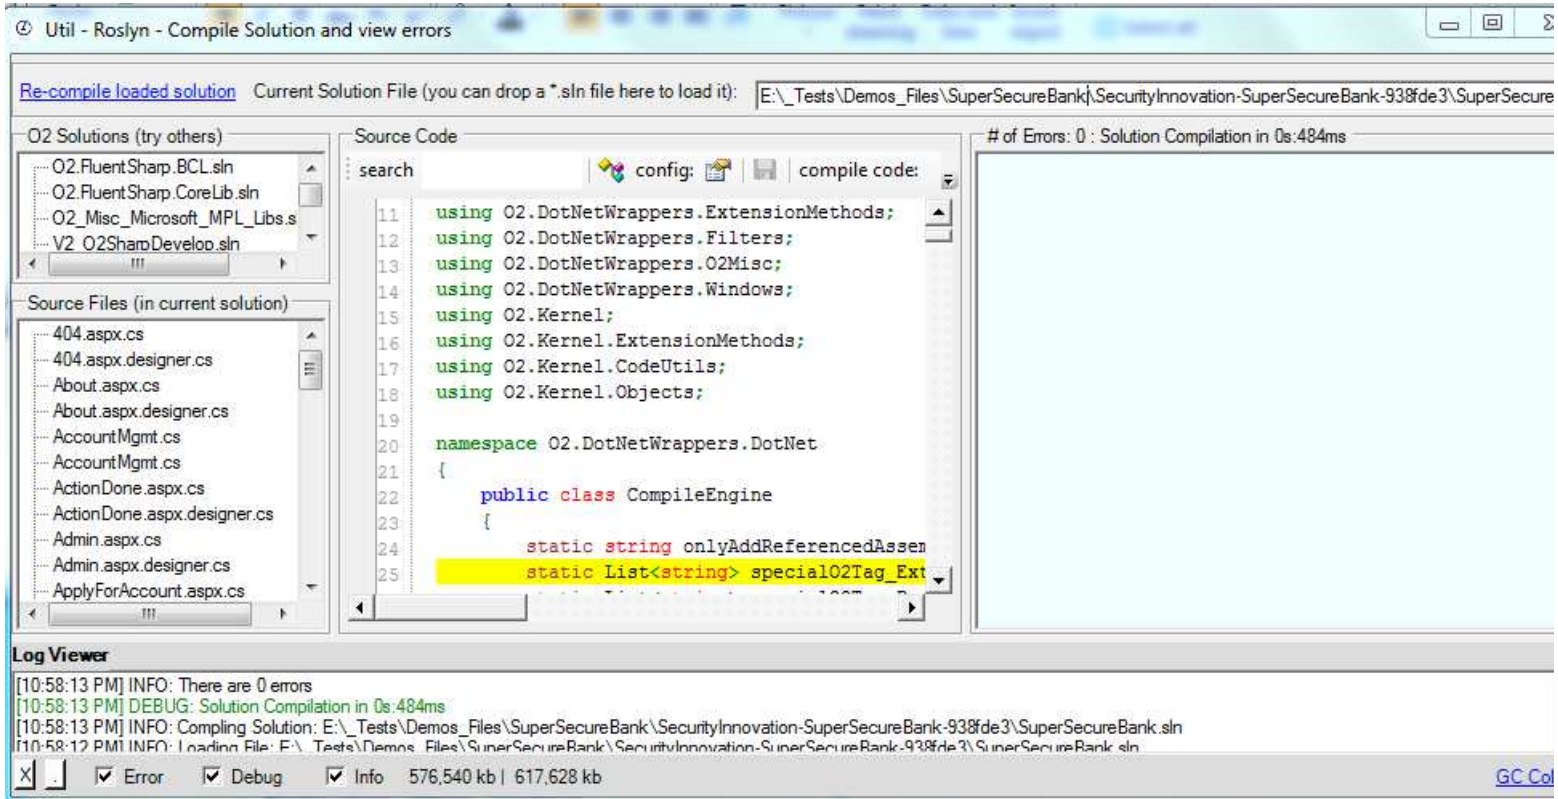

Here is a full tool (written as a script) which provides a nice GUI to view solutions and try the Roslyn Compiler on Solution files

**Tool with the the O2.FluentSharp.CoreLib.sln loaded** (which uses a couple C# capabilities not supported by the Roslyn compiler)

**Tool with the the SuperSecureBank.sln solution loaded** (which is compiled ok using the Roslyn compiler)

### Source Code

This is the code that creates the Gui (shown above):

```
//var topPanel = panel.clear().add_Panel();
```

```

var topPanel = "Util - Roslyn - Compile Solution and view errors".popupWindow(1000,500)
    .insert_LogViewer();
var actionsPanel = topPanel.insert_Above(40,"");
var codeViewer = topPanel.title("Source Code").add_SourceCodeEditor();
var sourceCodeFiles = topPanel.insert_Left(200, "Source Files (in current solution)").add_TreeView().sort
();
var errorsList = topPanel.insert_Right("Errors").add_TreeView();
var o2Solutions = sourceCodeFiles.parent().parent().insert_Above(100,"O2 Solutions (try
others)").add_TreeView();

var solutionFile = "";
sourceCodeFiles.afterSelect<IDocument>(
    (document)=> codeViewer.open(document.FilePath));

Action compile =
    ()=>{
        O2Thread.mtaThread(
            ()=>{
                var o2Timer = new O2Timer("Solution Compilation").start();
                IWorkspace workspace = Workspace.LoadSolution(solutionFile);

                "Compiling Solution: {0}".info(solutionFile);
                ISolution solution = workspace.CurrentSolution;
                var project = solution.Projects.first();
                var cancellationToken = new CancellationToken(false);
                var compilation = project.GetCompilation(cancellationToken);

                var errors = compilation.errors();
                var time = o2Timer.stop();
                "There are {0} errors".info(errors.size());
                errorsList.clear()
                    .add_Nodes(errors)
                    .BackColor(errors.size() > 0 ? Color.LightPink :
Color.Azure)
                    .selectFirst()
                    .focus()
                    .parent<GroupBox>().set_Text("# of Errors: {0} :
{1}".format(errors.size(), time));
                //var assembly = compilation.create_Assembly();
            });
    };

Action<string> loadSolution =
    (_solutionFile)=>{
        "Loading File: {0}".info(_solutionFile);
        if (_solutionFile.extension(".sln").isFalse())
            return;
        solutionFile = _solutionFile;
        sourceCodeFiles.clear();
        errorsList.clear().add_Node("Compiling solution...");
        codeViewer.open("");
        IWorkspace workspace = Workspace.LoadSolution(solutionFile);
        var files = (from project in workspace.CurrentSolution.Projects
                    from document in project.Documents
                    select document).toList();
        sourceCodeFiles.add_Nodes(files, (file)=>file.Name);
        actionsPanel.control<TextBox>(true).set_Text(solutionFile);
        compile();
    };

errorsList.afterSelect<Diagnostic>(
    (diagnostic)=>{
        var lineSpan = diagnostic.Location.GetLineSpan(true);
        codeViewer.open(lineSpan.Path);
        codeViewer.gotoLine(lineSpan.StartLinePosition.Line + 1);
    });

actionsPanel.add_Link("Re-compile loaded solution", ()=> compile())
    .append_Label("Current Solution File (you can drop a *.sln file here to load it):").autoSize()
    .append_TextBox("").align_Right();

actionsPanel.onDrop(loadSolution);
sourceCodeFiles.onDrop(loadSolution);
errorsList.onDrop(loadSolution);

o2Solutions.afterSelect<string>(loadSolution);

var sourceFolder = PublicDI.config.CurrentExecutableDirectory.pathCombine(@"..\..\O2.FluentSharp
\O2.FluentSharp.CoreLib");

```

```
loadSolution(sourceFolder.pathCombine(@"O2.FluentSharp.CoreLib.sln"));

o2Solutions.add_Files(PublicDI.config.CurrentExecutableDirectory.pathCombine(@"..\..\\"), "*.sln");

//using Roslyn.Compilers.CSharp
//O2File:API_Roslyn.cs
//using System.Threading
//using Roslyn.Services
//O2Ref:Roslyn\lib\net40\Roslyn.Services.dll
//O2Ref:Roslyn\lib\net40\Roslyn.Compilers.dll
//O2Ref:Roslyn\lib\net40\Roslyn.Compilers.CSharp.dll
```
